AIR DROP DIESEL FIRE PUMP

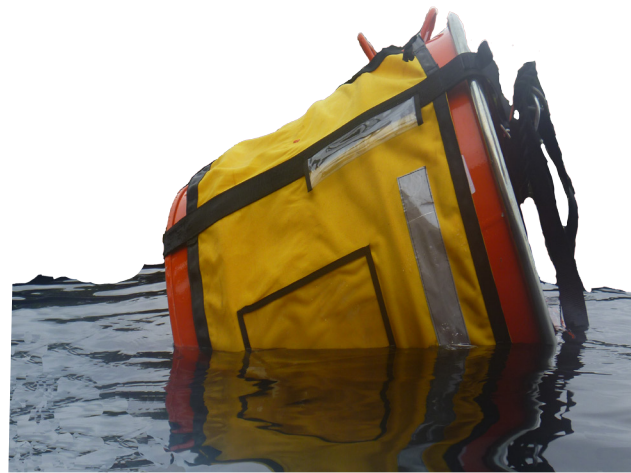

The YDP20AD portable diesel fire pump designed and built by Britton Maritime Systems and is operated with a Yanmar L48 diesel engine.

The fuel efficient diesel pump can be operated 1.5-4 times longer than gasoline pumps. The advantage truly shows in night time and during other continuous pumping operations at site where no commercial power is available.

This pump was formally designed to be used in marine application for Naval bodies, to pump excess water from compartments and fight on board fires.

The YDP20AD pump is packaged in a heavy duty light weight container which can be dropped from any aircraft to vessels which are at sea or in distress.

The pump is currently being used by the Royal Australian Navy, The New Zealand Navy, UAE Coast Guard, Australian Water Police Forces.

AIR DEPLOYABLE

KEY FEATURES:

- 500 Litres per minute
- Non-corrosive features
- Aluminium shock-mounted frame
- 38mm Suction Hose with foot valve and stainer
- Storz male and female quick release connectors
